

MSDS Project

A joke safety data sheet about yourself, written as if you were a chemical element. Mrs. Porter wrote one about herself. This is the same shape with the lines left empty, because the facts are yours. Her own sections run from **one line to seven**. Short is fine.

1 General Information

Who discovered you, meaning your parents, by name.
Hers: "Discovered by: Jerry and Mary Brandow."

His to supply. One line, both parents' names.

2 Occurrence

Where there is a lot of you, and where there is almost none. **Hers:** "Large deposits located in warm areas like Key West." "Very small quantities located in very cold places such as Antarctica."

His to supply. Two lines: one place with large deposits, one with only trace amounts.

Physical or chemical

Sections 3 and 4 look alike. This is the difference.

- **Physical:** what you look like, and what **changes your state:** boils, melts, the states you are found in.
- **Chemical:** what you **do toward something else:** attracted, repelled, explodes, neutral.
- **Her lists cross over.** "Boils when people lie to her" is on her physical list even though it involves other people. So the word is the guide, not the topic.

BACKGROUND, FOR YOU

Porter graded this Sep 16 and left a private comment, "**Did not submit a project??**", unanswered. His Doc is blank, the **Turn In button is still live**. Her one slide is the whole spec; quoted lines below are hers, word for word. She does not say how it is scored, and her own two property lists cross into each other.

3 Physical Properties

What you look like, plus what changes your state. **Hers:** "Surface - brown hair with highlights, blue/green eyes, glasses, short, and likes to wear black." "Boils when people lie to her."

His to supply. Four lines. Surface (hair, eyes, height, clothes) · Boils when ... · Melts when ... · Found in these states ... (hers: joyful, grateful, impressed)

4 Chemical Properties

How you react to other things. **Hers:** "Is attracted to beaches or pools."

His to supply. Four lines, one per word. Is attracted to ... · Is repelled by ... · May explode if ... · Is neutral to ...

5 The element tile

Hers: number 51 (her age), symbol Rp, name Portium (surname plus "ium"), mass 512.6.

HER PATTERN, RUN ON HIS NAME

Atomic number: **15** (his age) · Symbol: **Sh**
 Element name: **Shroyerium** · Atomic Mass: **his pick**

The mass is free. Her slide gives no rule for it, so any number is as right as any other.

Gaps in her slide. No rule connects 512.6 to 51, so the atomic mass is unconstrained. She states no length, no layout, and not whether the tile is drawn. Her **Rp** may be Robyn Porter rather than Portium, in which case **As** fits her

pattern as well as Sh. Nothing here says how the project is scored.

Built from Porter's own exemplar, **MSDS Porter** (Google Slides, one slide), pulled from Drive "Shared with me" on 20 September 2026. A scaffold, not an answer key: the content is his own facts about himself. Quoted lines are hers, word for word. The blue block is her naming pattern applied to his name, not her words. Grey and orange text is for you.
